

# SPANNING DARK WEB MONITORING

—  
FRONT-LINE PROTECTION AGAINST CYBERTHEFT AND FRAUD | PURPOSE-BUILT FOR G SUITE

## BENEFITS

- Reduces the risk of a significant data loss incident requiring a costly, resource-intensive recovery and restoration effort
- Reduced risk of IP theft
- Reduced risk of financial fraud
- Reduced risk of a Business Email Compromise attack

## KEY CAPABILITIES

Continuous and intelligent search, analysis and monitoring of the dark web for potentially compromised or stolen G Suite credentials.

- Reports on all accounts in the domain – even if they are not licensed for backup
- Administrator email alerts
- Administrator dashboard integrated into Spanning Backup for G Suite
- Configurable report views
- Tailored notification settings

## Prevent Data Loss Before It Occurs

Spanning Dark Web Monitoring for G Suite alerts administrators of compromised or stolen employee credentials, enabling them to take proactive steps to secure those accounts before malicious activity occurs. They can then leverage Spanning's audit reporting and search capabilities to determine if data loss has taken place and restore corrupted data in just a few clicks. The service is pre-configured and provides intuitive administrator controls integrated with Spanning Backup, activated within G Suite, and designed to provide an administrator experience identical to G Suite.

## Protecting G Suite Credentials

Email is the primary target for hacking and fraud and weak or stolen credentials is the number one hacking technique. G Suite credentials enable access to more than just that individual's email account. They secure access to all the user's G Suite applications and services like Drive, Team Drives, Hangouts and Sites, other Google services containing sensitive information such as Analytics, Ads and Google Cloud, plus thousands of data-rich, third-party business applications including Human Resource Management, Payroll, Customer Relationship Management, Project Management, Professional Services Automation, and Marketing Automation systems.

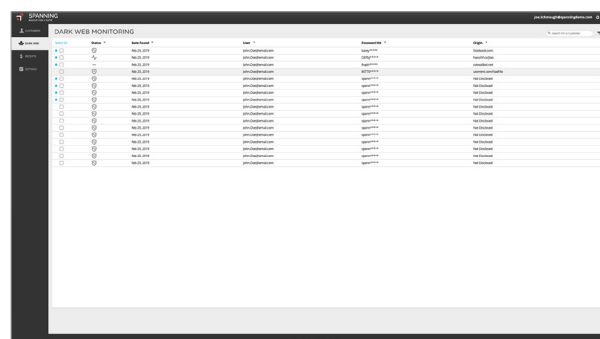

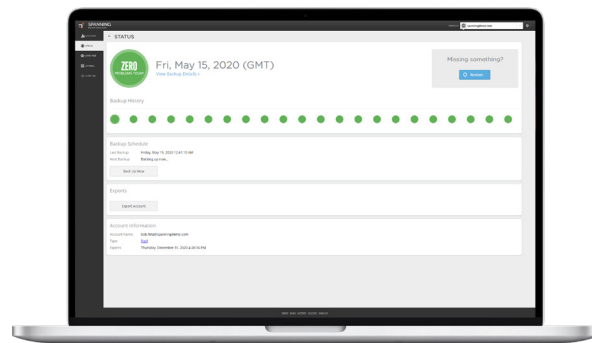

## Proactive Defense Against Account Takeover Attacks

Account Takeover (ATO) attacks have become a very common and lucrative business for cybercriminals who steal or buy credentials in third-party breaches and then reuse them to gain easy access into corporate systems to steal IPs, perpetrate business email compromise, gain access to financial accounts and commit other types of cyber fraud. Spanning Dark Web monitoring reduces the risk of an ATO, protecting the business from potential financial and competitive impacts and minimizing the chance of a significant data loss incident requiring a costly, resource-intensive recovery and restoration effort.

## Fast and Easy to Install and Use

Our service is pre-configured and provides intuitive administrator controls integrated with Spanning Backup, activated in G Suite, and designed to provide an administrator experience identical to G Suite.

- Functionality is Installed and configured in minutes
- Instant, automatic connectivity to your domain
- Report with current status plus alerts of newly identified compromised accounts
- Customizable Dashboard enabling filtered views based on Date, Active Status, Type, and Source

## Industry-Leading Monitoring Platform

Spanning Dark Web Monitoring is based on the latest in dark web surveillance technologies. We combine human expertise and sophisticated Dark Web intelligence with comprehensive search capabilities to identify, analyze and proactively monitor for your organization's compromised or stolen credentials.

- Powerful, comprehensive search of botnets, criminal chat rooms, blogs, websites and bulletin boards, peer-to-peer networks, forums, private networks, and other black-market sites
- Leverages a combination of human and artificial intelligence for enhanced analysis
- Monitors over 500 distinct Internet Relay Chatroom (IRC) channels, 600,000 private websites, 600 Twitter feeds, and executes 10,000 refined queries daily
